

**Job title:**  
**Network Design Engineer**

**Location:**  
**Prishtina**

### **About us**

We offer comprehensive consulting and engineering services for network operators throughout Europe and support them with our experience and expertise in the expansion of their network infrastructures. With our services we accompany our customers from the feasibility study to the documentation of the built network.

### **Responsibilities:**

- Designing and recording of fibre optic networks based on rough planning using specific software;
- Building and maintaining of graphic network documentation;
- Identifying capacity bottleneck and developing alternatives;
- Summarising of capacities of pipe systems;
- Managing spatial infrastructure;
- Flexibility during redesigning the network and changing process.

### **Requirements:**

- Graduate/Undergraduate in Engineering (Electrical/Mechanical/Civil);
- Experience in technical planning;
- Experience in telecommunications or network construction is an advantage;
- Experience in CAD software;
- Excellent written and verbal English skills (German is an advantage).

### **We offer:**

- Trainings from our Swiss partners in telecommunication field;
- Opportunity to work with the biggest telecommunication companies in Switzerland and beyond;
- Competitive salary and benefits in a highly meritocratic company.
